***IN THE DARK**

ROUND THE CORNERS OF
YOUR FILM.
INSERT THE IN THE SPIRAL
ABOUT 10 CM.

START TWISTING.

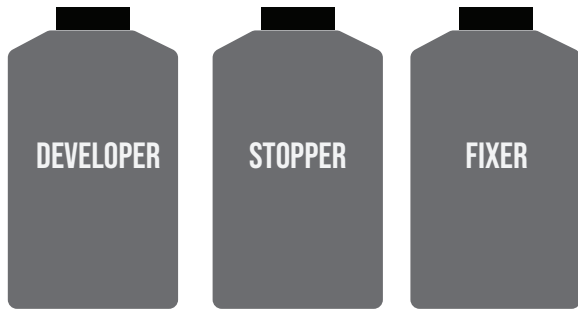

ONCE YOU REACH THE END
OF YOUR FILM, MAKE SURE
IT IS TOTALLY IN THE
SPIRAL.

PLACE THE SPIRAL INSIDE
THE FILM TANK AND
CLOSE IT.

B&W FILM DEVELOPMENT

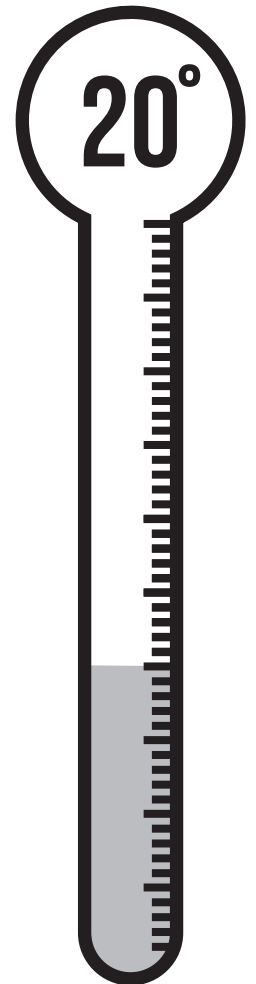

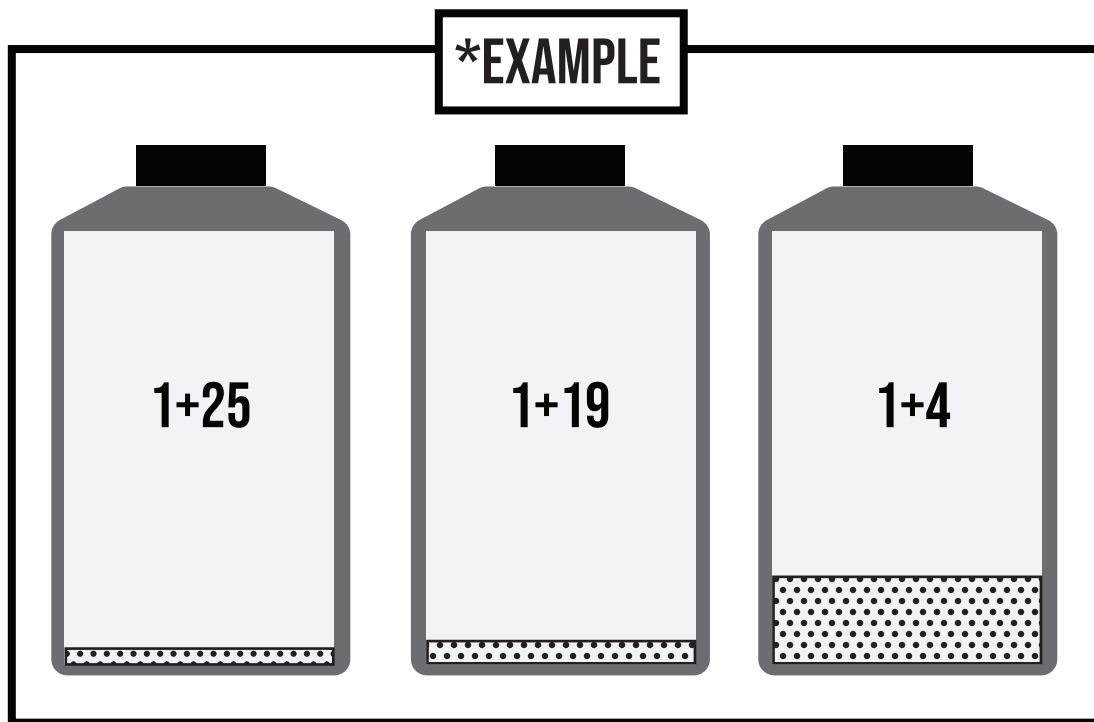

CHEMICALS

THERE ARE THREE MAIN CHEMICALS
NEEDED FOR FILM DEVELOPMENT:

THEY COME IN STOCK (CONCENTRATED) SOLUTIONS AND
NEED TO BE DILUTED DOWN WITH WATER TO MAKE WORKING
SOLUTION:

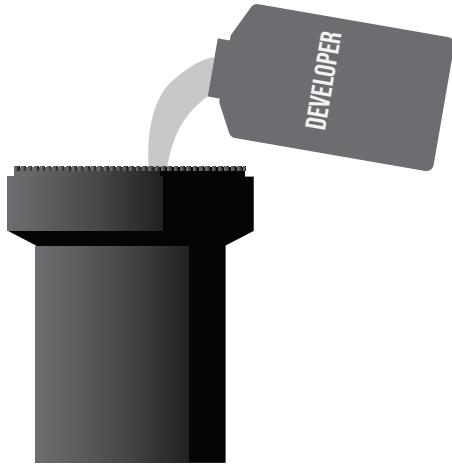

THIS CONCENTRATION IS ALWAYS* STATED ON THE BOTTLE.

MIX YOUR CHEMICALS AT THE APPROPRIATE DILUTIONS
WITH WATER AT 20 DEGREES CELSIUS.

B&W FILM DEVELOPMENT

DEVELOPMENT

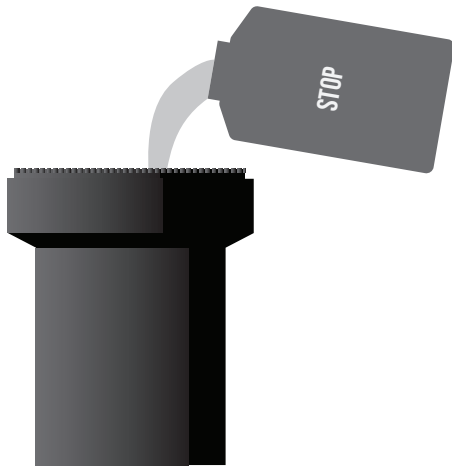

TO DEVELOP YOU NEED TO POUR THE CHEMICALS IN THE CORRECT ORDER, FOR THE CORRECT TIME, AND AGITATE CORRECTLY (CHECK AGITATION PAGE)

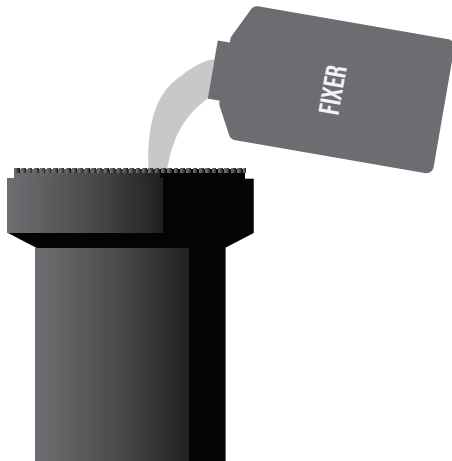

1. DEVELOPER:
POUR AND AGITATE FOR A FULL MINUTE, THEN 10 SECONDS EVERY OTHER MINUTE.

DEVELOPER TIMES VARY ACCORDING TO FILM STOCK AND DEVELOPER USED.

YOU CAN CHECK RECIPES ONLINE HERE:

2. STOP BATH:
POUR AND AGITATE CONTINUOUSLY FOR 30 SECONDS.

3. FIXER:
POUR AGITATING FOR 30 SECONDS AND STOPPING FOR 30 SECONDS, EVERY MINUTE.
FIXING TIMES CAN BE CHECKED ON THE BOTTLES. IF NOT PRESENT, DEFAULT TO 5 MINUTES.

AGITATION

TO AGITATE START BY CLOSING THE LID OF YOUR FILM TANK.

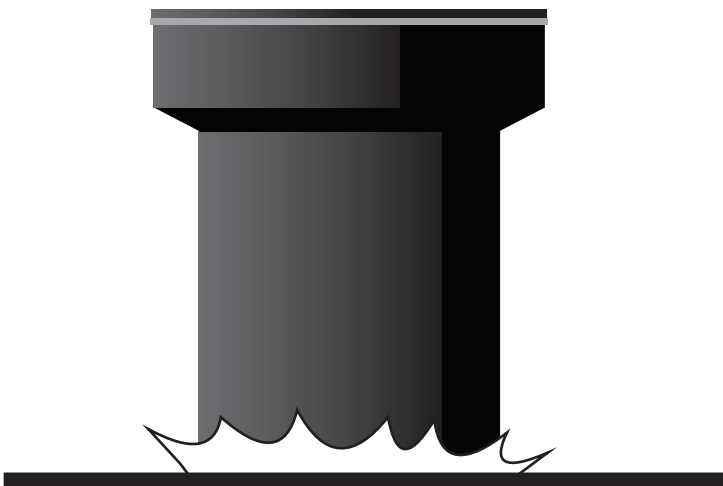

PRESS IT ALL THE WAY AROUND.

THEN USE ONE HAND TO PRESS THE MIDDLE OF THE LID DOWN AND LIFT ONE SIDE TO RELEASE AIR, AND FORM A TIGHT SEAL (USUALLY MAKES SMALL A SOUND).

WITH THE LID CLOSED, HOLD THE TANK AT THE BASE AND TOP, AND INVERT IT BACK AND FORTH.

TWO INVERSIONS SHOULD TAKE AROUND 3 SECONDS (UPRIGHT - BOTTOM-UP - UPRIGHT).

AFTER EVERY CYCLE OF INVERSION, TAP THE BASE OF THE TANK ON A TABLE.
